github.com/AustinCroucher247

Web developer with three years of agency experience building CMS-driven sites, contest platforms and internal tools. Outside of client work I ship products end to end, including a real-time household app with an LLM assistant and two Unity games. Before software I spent a decade leading restaurant teams, so I am comfortable owning a project from the first client conversation to launch.

EXPERIENCE

Web Developer · The Design Cell — Aug 2023 – Present · Burlington, ON

- Build and maintain client websites on WordPress and headless CMSs (Strapi, Sanity) using PHP, JavaScript and React.
- Deliver contest and rebate platforms, learning modules and internal dashboards backed by MySQL.
- Own projects from build through launch and support, working directly with designers and account leads.

Sales & Partnerships · Adver.Games — Feb 2026 – Present · Part-time

- Lead outbound and partnership development for interactive and experiential gaming projects.
- Run discovery calls and demos, turning what a client wants into a scope a team can build.

Web Developer, contract · GTA Mac Repair — 2019 – Present · Toronto, ON

- Built small-business sites from scratch in PHP and MySQL, plus others on WordPress and Wix.
- Diagnose front-end and back-end issues directly with business owners.

General Manager · Café Landwer — 2020 – 2023 · Toronto, ON

- Ran front and back of house for a team of 85+ at a restaurant with $3M in annual revenue.

Bar Manager · Milestones — 2015 – 2019 · Richmond Hill, ON

- Designed an inventory system that produced Ontario's highest alcohol sales and lowest cost, by a 10% margin.

PROJECTS

Household HQ · Private PWA, in daily use — JavaScript · Firebase · LLM API

- Six small apps behind one login (budget, groceries, recipes, movies, calendar), synced live between devices with Firestore.
- Budget engine parses bank exports, sorts each purchase and keeps a rolling ledger; an LLM assistant returns structured results through tool calls.

From Ashes to Orbit · Sci-fi colony sim — Unity 6 · C#

- One task-queue system drives a single unit or a whole colony across six regions simulated at once, covered by edit-mode and play-mode tests.

Hollow Ward · First-person horror puzzle game — Unity 6 · C#

- Modular assemblies for player, puzzles, enemies, save and UI; full world-state saving; keyboard and controller with live-switching prompts.

Retro Rumble · Browser arcade, BrainStation capstone — React · Node · MySQL · Socket.IO

- Canvas games with accounts, leaderboards and live game streams over WebSockets.

SKILLS

Front end	React, JavaScript, TypeScript, HTML, CSS, Sass, Tailwind, Vite
Back end	Node, Express, PHP, MySQL, Firebase (Auth, Firestore), REST APIs
Content	WordPress, Strapi, Sanity
Also	Unity and C#, LLM APIs and tool use, AI-assisted development, Git, Netlify

EDUCATION

Diploma, Software Engineering · BrainStation — 2023
BA (Honours), Philosophy · York University — 2014
Certificate, Conflict Resolution · York University — 2015
